

Libbey Glass

Market Focus: Corporate

American Interiors was excited for the opportunity to work with Libbey Glass since both companies are rooted in Toledo.

Libbey's objectives for the project were aimed at reducing costs and increasing productivity. AI and Knoll worked with the design firm to come up with a workplace concept that promoted daylighting by maintaining 93% of the window visibility. Other important design factors were efficiency, storage, display area, integration of technology, and promotion of collaboration. Libbey believed that Knoll's products provided by AI were the appropriate solution for their variety of spaces. Libbey was very interested in moving forward to a lean organization with an open environment that's progressive but allows for some heads down focus areas as well. Knoll's workplace research was valuable in the schematic phase of design. The project now represents the benchmark for corporate office spaces in Toledo.
